PEACOCK PRO

The Peacock Pro Display

DESIGNED FOR THE CASINO FLOOR

Peacock Pro is a next-generation table display and management platform designed specifically for the modern casino environment. Combining professional-grade display hardware with powerful centralized software, Peacock Pro gives casino operators complete control over table information, betting limits, games, advertising and media content.

From a single table to an entire gaming floor, Peacock Pro provides a flexible and scalable solution built around the way casinos operate.

Anti-Glare LCD Display

A high-quality anti-glare LCD screen provides clear, easy-to-read information while minimizing reflections from casino lighting. Designed for continuous casino operation and excellent visibility from the gaming floor.

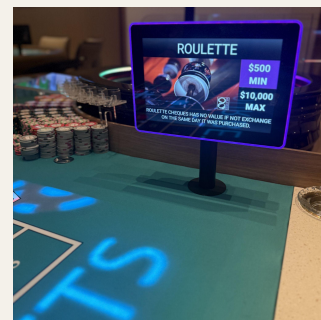

Color-Matched Bezel

The colored bezel complements the existing MIN/MAX table-limit display, creating a clean, professional appearance that integrates naturally with the gaming table.

Dynamic Media Support

Display JPEG, PNG and MP4 content, including casino branding, promotions, player messaging, graphics and video advertising.

Standby Advertising

When a game is not in play, Peacock Pro can manually transition into standby mode and display or loop promotional content. Your display continues working as a valuable marketing platform even when the table is inactive.

Ethernet & Wi-Fi Connectivity

Flexible connectivity allows properties to use wired Ethernet or Wi-Fi based on their IT infrastructure and installation requirements. Ethernet is recommended where available for maximum reliability.

Compact 4" Pole Configuration

The standard 4-inch mounting pole provides a clean, compact installation while maintaining excellent visibility for players and casino personnel.

Player Rating System Compatibility

Peacock Pro can be configured to work with Genesis, Bravo and other supported player-rating systems. As this integration continues to evolve, compatibility is confirmed and configured on a property-by-property basis.

Additional costs may apply. System, software and property restrictions may apply.

Peacock Pro Management Platform

COMPLETE CONTROL FROM ONE LOCATION

Peacock Pro puts the power of your table displays directly in the hands of authorized casino personnel through an intuitive, centralized management platform. Manage your gaming information, table limits, advertising and media content without having to manually configure every display individually.

Centralized Management

From the Peacock Pro Admin Management System, operators can:

- Manage games and game configurations
- Manage betting options and table limits
- Upload and manage advertising and media
- Update multiple displays
- Organize displays by name
- Make changes without manually configuring individual units

Turn Every Display Into a Marketing Platform

Scheduled Media & Advertising — Peacock Pro allows casinos to schedule advertising and promotional content based on time, event or operational requirements.

Promote: Casino Events • Player Promotions • Restaurants • Entertainment • Property Offers • Special Events • Casino Branding

Scheduled content gives marketing and operations teams greater control over what is displayed and when it appears.

Built for Casino IT Environments

CONNECTED OR COMPLETELY OFFLINE

Peacock Pro provides flexibility for properties with different IT and security requirements. For properties that prefer not to connect displays to an external cloud environment, the Peacock Pro Windows application provides a fully offline, on-premise option.

Administrators can create and export content packages to a USB drive and import them directly into individual displays.

Connected when you want it. Offline when you need it.

Manage Your Entire Floor with Ease

MULTIPLE USERS · DEVICE NAMING · CENTRALIZED CONTROL

Peacock Pro supports multiple authorized users under a single account, allowing operations, marketing, IT and management personnel to access the system as needed.

Each display can also be assigned a custom alias, making individual units easy to identify. Examples include:

BJ101 • BJ102 • PIT 3 • HIGH LIMIT 1

When displays are online, administrators can quickly identify the specific unit they are managing — making large-scale deployments easier to organize and maintain.

2-Year Hardware Warranty

Every Peacock Pro display is backed by a two-year hardware warranty, providing additional protection and confidence in your equipment investment.

1-Year Subscription

Each purchase includes one year of access to the Peacock Pro Back-End Management Portal and its media-control capabilities.

1-Year Technical Support

The first year includes technical support assisting with setup, configuration, connectivity and general system-related questions.

ONE PLATFORM. COMPLETE CONTROL.

Peacock Pro brings together professional casino table displays and powerful management software in one complete solution. Whether managing a single gaming table or hundreds of displays across multiple pits, Peacock Pro gives casino operators the flexibility to control table information, betting options, games, advertising and media from one centralized platform.
